Components Map: Funding Outreach / Rohit (accelerator recruitment)

Seed and pre-seed announcements only. Trigger → Input → Context → Processing → AI → Output, as built.

Draft only, a human sends

The pipeline never sends email. Approve is the one place mail leaves, and it needs a person's click. On the public site it goes only to a test inbox unless live mode (with a PIN) is switched on.

Scored once, never twice

Each startup is claimed in the database before any work starts (unique name and domain), scored once, and ranked by that stored score. Changing the thesis only affects startups that arrive afterwards.

Contact SOP: first hit wins, nothing guessed

Only for startups that pass the score: company contact page, the founder's own site, Hunter, then a company inbox. Addresses go in the Gmail To field and are never shown on the dashboard.
